

1T50392 | Jigsaw blade - Double tothing - For solid hardwood - U attachment **TECHNIC** (Blister)

High-alloy vanadium chrome steel is used for working on softer materials such as wood, fiberboard panels, and synthetic materials.

- Cross ground, tapered
- Double tothing
- Carbon steel tothing

Machine

Application

Features

Properties and benefits

- + Cross ground, tapered: each tooth is perpendicular to the cutting axis, is aligned, and cuts along its entire width. The sides and the back are tapered. ➡ Enables fast and straight cutting. The blade does not come back into contact with the material and enables a fine and clean cut.
- + Double tothing: blade with a double cutting edge, thanks to its teeth running all the way around. ➡ Enables cutting in any direction, without turning your saw around. You save time and energy, for optimal comfort.
- + Blade made from HCS carbon steel: high-strength carbon steel ideal for cutting into soft wood and non-abrasive carpentry materials. ➡ Enables longer service life thanks to the flexibility of the blade.
