

Tools made of bi-metal HSS steel Speed and precision thanks to their variable pitch teeth.

- Alternate top bevel
- HSS tothing
- Variable teeth

6 bi-metal HSS hole saws Ø 22 - 29 - 35 - 38 - 44 - 51 - 68 mm + 2 hexagonal shank pilot shafts + 1 adapter

Machine

Application

Metal

Plastic

Features

Properties and benefits

- + Alternating teeth: teeth spaces alternating from left to right. ⤴ Facilitates the cutting and removal of particles and prevents the blockage of the saw during cutting.
- + Bi-metal steel blade: combination of progressive tothing made from quick-cutting tempered steel (HSS), and the body made from high-strength carbon steel (HCS). ⤴ Very flexible, used when there is a risk that the attachment will break. Very high resistance to wear, for a longer service life.
- + Variable tothing: design whereby the teeth are positioned with irregular gaps (pitches) and with alternating small and large teeth with different gap sizes. ⤴ Enables the cutting of a wide range of different materials. Reduces the risk of teeth breaking and reduces vibrations when cutting.
